## 1 STUDY AREA DEMOGRAPHICS

The socioeconomic characteristics of the study area are important to understand in the process of alternative formulation and making choices among the alternatives. This section provides data that describe the socioeconomic makeup of the study area and surrounding county.

### 1.1 RACE AND ETHNICITY

Table 1 breaks down the total population, as well as the racial and ethnic makeup, for Brazoria, Jefferson, and Orange counties and the study areas within each of these counties for the years 2000 and 2010.

Table 1. County and Study Area Racial Composition

|  | Brazoria County |  |  |  | Study Area |  |  |  |

Source: U.S. Bureau of the Census, 2010

Brazoria County's population increased by almost 30 percent between 2000 and 2010. Jefferson County increased by only 0.1 percent while Orange decreased almost four percent for the same period. The study area in Brazoria County, by contrast, increased by almost 91 percent from 2000 to 2010. The study area in Jefferson County decreased by 2.2 percent, while the study area in Orange County decreased by 3.2 percent. The study areas in the three counties represented 19.4 percent of the total population of the three counties in the year 2000 and around 20 percent in 2010. Minority population comprised 45.7 percent of the population for Brazoria County in 2000 and 46.8 percent in 2010. Minorities made up 53.3 percent of the population in Jefferson County in 2000 and 55.4 percent in 2010. Minorities made up 15.6 percent of the population in Orange County in 2000 and 17 percent in 2010. The study area minority population in Brazoria County was almost 53 percent in 2000 but decreased to 39 percent in 2010. The minority population in the study area of Jefferson County was 53.3 percent in both 2000 and 2010, while the minority population for the study area in Orange County was 19.2 percent in 2000 and 20.9 in 2010.

### 1.2 INCOME

On the next page, Figures 1, 2, and 3 illustrate the income distribution based on household income for the three counties, as well as the study areas within the three counties in 2010. As the charts illustrate, the distribution of income of the Counties as a whole are similar to the income distribution of the study areas within the three counties. Brazoria has relatively higher percentages of households with incomes ranging from $\$ 50 \mathrm{~K}$ up to $\$ 125 \mathrm{~K}$. Jefferson has more relatively low levels of income but incomes increase between the levels of $\$ 50 \mathrm{~K}$ to $\$ 125 \mathrm{~K}$. Orange County, like the other two counties, has relatively substantial high percentages of incomes between $\$ 50 \mathrm{~K}$ up to $\$ 125 \mathrm{~K}$, but also has nearly 10 percent of its population that have household incomes of less than \$10K.

Figure 2. 2010 Income Distribution for Orange County

Source: U.S. Bureau of the Census, 2010
Figure 3. 2010 Income Distribution for Brazoria County

As the charts illustrate, the distribution of income of the study areas of each county is similar to that of the counties as a whole. All have relatively higher percentages of households with incomes in the range of $\$ 50 \mathrm{~K}$ to $\$ 125 \mathrm{~K}$, with the exception of Orange, which has fairly large segment of the population with incomes below $\$ 10 \mathrm{~K}$.

Table 2 displays the number of households, aggregate household income, and average household income for counties and the study areas in 2010.

Table 2. 2010 Household Income

| Household Characteristic | Brazoria County | Study Area |
| :--- | ---: | ---: |
| Total Households | 101,656 | 15,398 |
| Aggregate Income | $\$ 8,131,315,866$ | $\$ 941,129,375$ |
| Average Income | $\$ 79,989$ | $\$ 61,120$ |
|  |  |  |
|  | Jefferson County | Study Area |
| Total Households | 90,671 | 16,833 |
| Aggregate Income | $\$ 5,316,131,170$ | $\$ 814,135,843$ |
| Average Income | $\$ 58,631$ | $\$ 48,365$ |
|  |  |  |
|  | Orange County | Study Area |
| Total Households | 31,271 | 21,553 |
| Aggregate Income | $\$ 1,868,247,406$ | $\$ 1,235,127,500$ |
| Average Income | $\$ 59,744$ | $\$ 57,307$ |

Source: U.S. Bureau of the Census, 2010

While the pattern of the income distribution between the study areas within the counties and the income distribution of the counties as a whole is similar, slightly higher percentages of households in the study areas have lower incomes than those of the entire counties. This is evident when examining the average household income for the study areas and the counties. Average household income for the study area in Brazoria County is approximately 76 percent of the average income for the entire county. In Jefferson County, the study area household income is approximately 82.5 percent of the county, while the study area in Orange County is 96 percent of the household income of the entire county. The study area in Jefferson County also has the lowest average household income of the three counties.

Table 3 describes the poverty status for the three counties and the study areas within the three counties. Brazoria and Orange counties have relatively low poverty levels, while Jefferson County
has a higher percentage of its population below the poverty level; 23.4 percent for the study area and 18.8 percent for the entire county.

Table 3. Poverty Status

| Population Characteristic | Brazoria County | Study Area |
| :--- | ---: | ---: |
| Total for Poverty Determination | 287,910 | 42,357 |
| Total Above Poverty Level | 257,324 | 36,265 |

### 1.3 EDUCATION

Figures 4, 5, and 6 depict educational attainment for Brazoria, Jefferson, and Orange counties, as well as the study areas within those counties for 2010. The study area in Brazoria County has higher percentages of lower levels of educational attainment than the county as a whole. Educational attainment for the study area in Jefferson County closely mirrors that of the county. Orange County exhibits a pattern similar to that of Brazoria County.

### 1.4 EMPLOYMENT

Table 4 displays the unemployment rates for Brazoria, Jefferson, and Orange counties, as well as the study areas within those counties for 2010. Unemployment rates are lowest for Brazoria County but highest for Jefferson County, both for the study area and the entire county.

Table 4. County and Study Area Unemployment Rates

| Labor Force Characteristic | Brazoria County | Study Area |
| :--- | ---: | ---: |
| Total Civilian Labor Force | 147,009 | 20,310 |
| Employed | 138,962 | 19,002 |
| Unemployed | 8,047 | 1,308 |
| Unemployment Rate | $5.5 \%$ | $6.4 \%$ |
|  |  |  |

### 1.5 HOUSING

Table 5 describes the occupancy status, vacancy rates, and the percentages of home ownership and rentals for Brazoria, Jefferson, and Orange counties, as well as the study areas within those counties, for 2010. Vacancy rates for all three of the study areas within the three counties are higher than the vacancy rates for the three counties as a whole, with Brazoria County being the highest at 20.7 percent. Vacancy rates for the three counties range from 9.9 percent in Brazoria County to 12.1 percent in Orange County. Home ownership is highest in Orange County with a rate of 76.7 percent, and lowest in Jefferson County with rate of 63.2 percent. However, among the study areas, home ownership was lowest in Brazoria County with a rate of 66.7 percent.

Table 5. County and Study Area Housing Statistics

| Housing Characteristic | Brazoria County | Study Area |
| :---: | :---: | :---: |
| Total Units | 118,336 | 19,952 |
| Occupied Units | 106,589 | 15,816 |
| Vacant Units | 11,747 | 4,136 |
| Owner Occupied | 79,477 | 10,557 |
| Renter Occupied | 27,112 | 5,259 |
| Owner Occupied (Percent of Total Occupied) | 74.6\% | 66.7\% |
| Renter Occupied (Percent of Total Occupied) | 25.4\% | 33.3\% |
| Vacancy Rate | 9.9\% | 20.7\% |
|  |  |  |
|  | Jefferson County | Study Area |
| Total Units | 104,424 | 19,833 |
| Occupied Units | 93,441 | 16,998 |
| Vacant Units | 10,983 | 2,835 |
| Owner Occupied | 59,066 | 11,407 |
| Renter Occupied | 34,375 | 5,591 |
| Owner Occupied (Percent of Total Occupied) | 63.2\% | 67.1\% |
| Renter Occupied (Percent of Total Occupied) | 36.8\% | 32.9\% |
| Vacancy Rate | 10.5\% | 14.3\% |
|  |  |  |
|  | Orange County | Study Area |
| Total Units | 35,313 | 24,747 |
| Occupied Units | 31,031 | 21,303 |
| Vacant Units | 4,282 | 3,444 |
| Owner Occupied | 23,808 | 15,694 |
| Renter Occupied | 7,223 | 5,609 |
| Owner Occupied (Percent of Total Occupied) | 76.7\% | 73.7\% |
| Renter Occupied (Percent of Total Occupied) | 23.3\% | 26.3\% |
| Vacancy Rate | 12.1\% | 13.9\% |

### 1.6 POPULATION PROJECTIONS

The following population projections for Brazoria, Jefferson, and Orange counties come from the Texas State Data Center and reflect the projections based on its 2000-2010 migration scenario, which takes into account post-2000 population trends for age, sex, race, and ethnicity. Based on these projections, the total population for Brazoria, Jefferson, and Orange counties is expected to grow by 88, 27, and 18 percent, respectively, between 2010 and 2050. This compares with a
growth rate for the State of Texas of 61 percent for the same period under the same scenario. For Brazoria County, virtually all of the growth is through the non-white population. Growth in Jefferson and Orange counties is dependent on the Hispanic populations, which are projected to increase by 180 percent in Jefferson County and 211 percent in Orange County by 2050, and by Other populations. Alternately, Anglo populations will actually decrease in Jefferson County by 28 percent and just under 2 percent in Orange County. Black populations will stay fairly steady in Jefferson County and increase moderately in Orange County. Figures 7, 8, and 9 reflect the population growth of the three counties themselves, and Figure 10 and the growth rates of the State and the counties in comparison.

### 1.7 AFFECTED POPULATIONS

In accordance with Executive Order 12898, "Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations," data were compiled to help assess the potential impacts on minority and low-income populations within the study area. This information indicates that 10 of the 392010 Census tracts in the Brazoria County study area, 20 of the 33 tracts in the Jefferson County study area, and 7 of the 40 tracts in the Orange County study area have minority populations higher than 50 percent. Table 6 shows the racial makeup percentages of each census block that intersects the study area. Those with minority populations above 50 percent are highlighted in red.

Table 6. Distribution of Population by Race/Ethnicity per Census Tract

Source: U.S. Bureau of the Census, 2010

In assessing the existence of low-income populations for the study area, mean household incomes were examined for all of the study area Census tracts. Based on a poverty threshold for a family size of three (considering that average number of persons per household for each county ranged from 2.53 to 2.85 ), an income of $\$ 17,373$ was used for comparison. None of the census blocks fall below this poverty threshold. Table 7 presents the median income for each census block in the study area and the amount by which the median income per block is above the poverty threshold.

### 1.9 ASSESSMENT OF PROTECTED POPULATIONS AND POTENTIAL IMPACTS

### 1.9.1 Orange-Jefferson CSRM

The potential for impacts from the Tentatively Selected Plan on protected populations exists primarily at the Orange-Jefferson CSRM since it encompasses the construction of new levees and floodwalls. Both Freeport and Port Arthur have systems that are being proposed for improvements over their existing conditions. For the purposes of making a determination on the potential for impacts on potentially protected populations, the racial makeup of the Census block groups that intersect the footprint of the proposed features of the Orange-Jefferson portion of the TSP were examined. Of the eleven Census block groups, only one displayed a population where more than 50 percent of the population was non-white. Census block 202.1 has a white population of 44.1 percent with the remaining belonging to historically identified minority groups. There is no indication that populations may be protected on the basis of existing income among these Census block groups. Census block 202.1, however, resides at the very end of the Orange 3 reach of the proposed TSP in Orange County where impacts would not be expected to be as great as the potential impacts in other areas. Regardless, there should be no disproportionate impacts on the populations in this Census block.

### 1.9.1.1 County Economic Profile

To compare economic sectors of the three counties with those of the study areas within those three counties, information in Table 8 was obtained from the 2007 County Business Patterns, which outlines the number of employees and establishments for the major North American Industry Classification System (NAICS) classifications. The table gives the total number of employees per broad NAICS category for the three counties and for the zip codes that intersect the study areas within the three counties.

Table 8. 2010 County and Study Area Civilian Employment by NAICS Sector

Source: U.S. Bureau of the Census, 2010

In terms of total employment, both Brazoria County and the study area within Brazoria County have more Educational Services and Health Care and Social Assistance employees than any other business sector. This also true for Jefferson County and Orange County.
