## APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

#### **SECTION I: BACKGROUND INFORMATION**

# A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): 21 July 2017

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Galveston District, SWG-2014-00303, Elan Land Investments, 313-acre Site, Wetlands 1-7, Conroe, Montgomery County, Texas C. PROJECT LOCATION AND BACKGROUND INFORMATION: State: Texas County/Parish: Montgomery City: Near Conroe Center coordinates of site (lat/long in degree decimal format, NAD-83): Lat. See Table 1. ° N, Long. °W; Universal Transverse Mercator: UTM: , See Table 1. N., E..NAD: Name of nearest water body: Copeland Ditch Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: None Name of watershed or Hydrologic Unit Code (HUC): East Fork San Jacinto River - 12040103; West Fork San Jacinto River - 12040101 Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request. Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form. D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY): Office (Desk) Determination. Date: 30 May 2017 Field Determination. Date(s): 08 September 2016 SECTION II: SUMMARY OF FINDINGS A. RHA SECTION 10 DETERMINATION OF JURISDICTION. There Are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required] Waters subject to the ebb and flow of the tide. Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:

## B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There Are no "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

1	Waters	of the	TIC
	waters	OI THE	1

a.

b.

Indicate presence of waters of U.S. in review area (check all that apply): 1
TNWs, including territorial seas
Wetlands adjacent to TNWs
Relatively permanent waters <sup>2</sup> (RPWs) that flow directly or indirectly into TNWs
Non-RPWs that flow directly or indirectly into TNWs
Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
Impoundments of jurisdictional waters
Isolated (interstate or intrastate) waters, including isolated wetlands
Identify (estimate) size of waters of the U.S. in the review area:
Non-wetland waters: linear feet: width (ft) and/or acres
Wetlands: acres

c. Limits (boundaries) of jurisdiction based on: Not Applicable.

Elevation of established OHWM (if known):

<sup>&</sup>lt;sup>1</sup> Boxes checked below shall be supported by completing the appropriate sections in Section III below.

<sup>&</sup>lt;sup>2</sup> For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

# 2. Non-regulated waters/wetlands (check if applicable):<sup>3</sup>

Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: The approximate 313 acre site contains seven (7) wetlands, totaling approximately 22.19 acres (Wetland 1 – approximately 0.61 acre, Wetland 2 – approximately 0.28 acre, Wetland 3 – approximately 2.98 acres, Wetland 4 - approximately 4.85 acres, Wetland 5 – approximately 1.34 acre, Wetland 6 – approximately 1.41 acre, and Wetland 7 – approximately 10.72 acres). Copeland Ditch, an intermittent tributary located approximately 1.0 mile to the south of the subject site, flows approximately 3.1 miles to the southeast to the point where it intersects with White Oak Creek. White Oak Creek, a tributary of the Caney Creek and relatively permanent water (RPW), flows approximately 13.4 miles to the southeast, to the point where it intersects with the East Fork San Jacinto River, a traditional navigable water (TNW).

Based on a review of multiple exhibits, our 08 September 2016 site visit, topographical maps, historical aerials, the U.S. Fish and Wildlife Service National Wetland Inventory map, the U.S. Department of Agriculture National Cooperative Soil Survey (NCSS) map data, and the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), there appear to be no discrete surface hydrological connections between the subject wetlands and any water of the U.S. The exact boundaries (as standard with isolated wetlands) were not verified, but the feature polygons were examined via aerial photography and during the 08 September 2016 site visit to ensure that they are enclosed polygons surrounded by uplands.

The subject wetlands are all located outside the 1% annual flood risk zone (100-year floodplain) of any water of the U.S.

- The subject wetlands are neither currently used, nor have been used in the past, nor susceptible to use for interstate or foreign commerce
- The subject wetlands are not subject to the ebb and flow of the daily tide.
- The subject wetlands do not cross interstate or tribal boundaries.
- There are no indications that these "Isolated\*" wetlands would 1) affect or be used by any interstate or foreign travelers for recreational or other purposes, 2) affect or be used for fish or shellfish that could be taken and sold in interstate or foreign commerce, or 3) be involved in any direct current use or potential use for industrial purposes by industries in interstate commerce.
- The subject wetlands are not impoundments of any water of the U.S.
- The subject wetlands are not part of a surface tributary system to any water body.
- The subject wetlands are not part of the territorial seas.
- The subject wetlands are not located "Adjacent\*\*" to waters of the U.S. (other than waters that are themselves wetlands).
- The subject wetlands are not located reasonably close to a waters of the US as to infer they are "ecologically adjacent"; for a water/wetland to be determined to "reasonably close" it must be in a geomorphic position such that an ecologic interconnectivity is beyond speculation or insubstantial for a known biologic species that requires both, the subject waters/wetlands and the nearest known waterbody (a known water of the U.S. other than an adjacent wetland) to fullfill spawning and/or life cycle requirements. There are no known species in this geo-region that requires both these waters/wetlands under review and the nearest known waterway to fulfill their life cycle requirements, therefore these waters/wetlands are ecologically isolated.
- \* 33 CFR 330.2 (e): Isolated waters means those non-tidal waters of the U.S. that are:
  - (1) Not part of a surface tributary system to interstate or navigable waters of the US; and
  - (2) Not adjacent to such tributary waterbodies.

\*\* 33 CFR 328.3 (a)(7) adjacent wetlands: Federal regulations, specifically 33 CFR 328.3 c) defines "ADJACENT" as: bordering, contiguous or neighboring. Wetlands separated from other waters of the U.S. by man-made dikes or barriers, natural river berms, beach dunes and the like are "adjacent wetlands."

In summary, the subject wetlands have been identifed per the Atlantic and Gulf Coastal Plain Region Supplement of the 1987 Corps of Engineers Wetland Delineation Manual. The subject wetlands are not inseparably bound to a water of the U.S., are not adjacent to any water of the U.S., and do not have a discrete hydrological surface connection to any water of the U.S. Therefore, the site wetlands are "isolated" with no known nexus to interstate commerce and as such would not be subject to federal jurisdiction under Section 404 of the Clean Water Act.

#### **SECTION III: CWA ANALYSIS**

## A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

## 1. TNW

Identify TNW:

Summarize rationale supporting determination:

<sup>&</sup>lt;sup>3</sup> Supporting documentation is presented in Section III.F.

#### 2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

# B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, fill out Section III.D.2 and Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the water body is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the water body has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

### 1. Characteristics of non-TNWs that flow directly or indirectly into TNW

2.

#### C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook, Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- 1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:
- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
- 3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

# D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:  TNWs: linear feet width (ft), Or, acres.  Wetlands adjacent to TNWs: acres.
2.	RPWs that flow directly or indirectly into TNWs.  Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial:  Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:
	Provide estimates for jurisdictional waters in the review area (check all that apply):  Tributary waters: linear feet width (ft) Other non-wetland waters: acres  Identify type(s) of waters:
3.	Non-RPWs <sup>8</sup> that flow directly or indirectly into TNWs.  Water body that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

-6-

<sup>8</sup>See Footnote # 3.

	Provide estimates for jurisdictional waters within the review area (check all that apply):  Tributary waters: linear feet width (ft).  Other non-wetland waters: acres Identify type(s) of waters:
4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.  Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.  Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
	Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
	Provide acreage estimates for jurisdictional wetlands in the review area: acres
5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.  Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.
	Provide acreage estimates for jurisdictional wetlands in the review area: acres
6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.  Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
_	Provide estimates for jurisdictional wetlands in the review area: acres
7.	As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.  Demonstrate that impoundment was created from "waters of the U.S.," or  Demonstrate that water meets the criteria for one of the categories presented above (1-6), or  Demonstrate that water is isolated with a nexus to commerce (see E below).
SUC	CLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, GRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY CH WATERS (CHECK ALL THAT APPLY): 10  which are or could be used by interstate or foreign travelers for recreational or other purposes. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce. which are or could be used for industrial purposes by industries in interstate commerce. Interstate isolated waters. Explain:  Other factors. Explain:
	·
ide	ntify water body and summarize rationale supporting determination:
	Provide estimates for jurisdictional waters in the review area (check all that apply):  Tributary waters: linear feet width (ft)  Other non-wetland waters: acres  Identify type(s) of waters:  Wetlands: acres

E.

<sup>&</sup>lt;sup>9</sup> To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

<sup>10</sup> Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

F.	NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):  If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.  Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.  Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).  Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain:  Other: (explain, if not covered above):
	Provide acreage estimates for non-jurisdictional waters in the review area, where the <u>sole</u> potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):  Non-wetland waters (i.e., rivers, streams): linear feet width (ft).  Lakes/ponds: acres.  Other non-wetland waters: acres. List type of aquatic resource:  Wetlands: ~ 22.19 acres.
	Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):  Non-wetland waters (i.e., rivers, streams): linear feet, width (ft).  Lakes/ponds: acres.  Other non-wetland waters: acres. List type of aquatic resource:  Wetlands: acres.
A.	SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):    Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Wetland delineation completed by the agent, March 2014.   Data sheets prepared/submitted by or on behalf of the applicant/consultant.   Office concurs with data sheets/delineation report. **B. ADDITIONAL COMMENTS TO SUPPORT JD:** The approximate 313 acre site contains seven (7) wetlands, totaling approximately 22.19 acres (Wetland 1 – approximately 0.61 acre, Wetland 2 – approximately 0.28 acre, Wetland 3 – approximately 2.98 acres, Wetland 4 - approximately 4.85 acres, Wetland 5 – approximately 1.34 acre, Wetland 6 – approximately 1.41 acre, and Wetland 7 – approximately 10.72 acres). Copeland Ditch, an intermittent tributary located approximately 1.0 mile to the south of the subject site, flows approximately 3.1 miles to the southeast to the point where it intersects with White Oak Creek. White Oak Creek, a tributary of the Caney Creek and relatively permanent water (RPW), flows approximately 13.4 miles to the southeast, to the point where it intersects with the East Fork San Jacinto River, a traditional navigable water (TNW).

Based on a review of multiple exhibits, our 08 September 2016 site visit, topographical maps, historical aerials, the U.S. Fish and Wildlife Service National Wetland Inventory map, the U.S. Department of Agriculture National Cooperative Soil Survey (NCSS) map data, and the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), there appear to be no discrete surface hydrological connections between the subject wetlands and any water of the U.S. The exact boundaries (as standard with isolated wetlands) were not verified, but the feature polygons were examined via aerial photography and during the 08 September 2016 site visit to ensure that they are enclosed polygons surrounded by uplands.

The subject wetlands are all located outside the 1% annual flood risk zone (100-year floodplain) of any water of the U.S.

- The subject wetlands are neither currently used, nor have been used in the past, nor susceptible to use for interstate or foreign commerce
- The subject wetlands are not subject to the ebb and flow of the daily tide.
- The subject wetlands do not cross interstate or tribal boundaries.
- There are no indications that these "Isolated\*" wetlands would 1) affect or be used by any interstate or foreign travelers for recreational or other purposes, 2) affect or be used for fish or shellfish that could be taken and sold in interstate or foreign commerce, or 3) be involved in any direct current use or potential use for industrial purposes by industries in interstate commerce.
- The subject wetlands are not impoundments of any water of the U.S.
- The subject wetlands are not part of a surface tributary system to any water body.
- The subject wetlands are not part of the territorial seas.
- The subject wetlands are not located "Adjacent\*\*" to waters of the U.S. (other than waters that are themselves wetlands).
- The subject wetlands are not located reasonably close to a waters of the US as to infer they are "ecologically adjacent"; for a water/wetland to be determined to "reasonably close" it must be in a geomorphic position such that an ecologic interconnectivity is beyond speculation or insubstantial for a known biologic species that requires both, the subject waters/wetlands and the nearest known waterbody (a known water of the U.S. other than an adjacent wetland) to fullfill spawning and/or life cycle requirements. There are no known species in this geo-region that requires both these waters/wetlands under review and the nearest known waterway to fulfill their life cycle requirements, therefore these waters/wetlands are ecologically isolated.
- \* 33 CFR 330.2 (e): Isolated waters means those non-tidal waters of the U.S. that are:
  - (1) Not part of a surface tributary system to interstate or navigable waters of the US; and
  - (2) Not adjacent to such tributary waterbodies.
- \*\* 33 CFR 328.3 (a)(7) adjacent wetlands: Federal regulations, specifically 33 CFR 328.3 c) defines "ADJACENT" as: bordering, contiguous or neighboring. Wetlands separated from other waters of the U.S. by man-made dikes or barriers, natural river berms, beach dunes and the like are "adjacent wetlands."

In summary, the subject wetlands have been identifed per the Atlantic and Gulf Coastal Plain Region Supplement of the 1987 Corps of Engineers Wetland Delineation Manual. The subject wetlands are not inseparably bound to a water of the U.S., are not adjacent to any water of the U.S., and do not have a discrete hydrological surface connection to any water of the U.S. Therefore, the site wetlands are "isolated" with no known nexus to interstate commerce and as such would not be subject to federal jurisdiction under Section 404 of the Clean Water Act.
