

**U.S. ARMY CORPS OF ENGINEERS
REGULATORY PROGRAM
APPROVED JURISDICTIONAL DETERMINATION FORM (INTERIM)
NAVIGABLE WATERS PROTECTION RULE**

I. ADMINISTRATIVE INFORMATION

Completion Date of Approved Jurisdictional Determination (AJD): 1/15/2021
 ORM Number: SWG-2018-00681
 Associated JDs: SWG-2018-00681 dated 26 August 2019 (Rapanos)
 Review Area Location¹: State/Territory: Texas City: Bridge City County/Parish/Borough: Orange
 Center Coordinates of Review Area: Latitude 30.031621 Longitude -93.848339

II. FINDINGS

A. Summary: Check all that apply. At least one box from the following list MUST be selected. Complete the corresponding sections/tables and summarize data sources.

- The review area is comprised entirely of dry land (i.e., there are no waters or water features, including wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
- There are “navigable waters of the United States” within Rivers and Harbors Act jurisdiction within the review area (complete table in Section II.B).
- There are “waters of the United States” within Clean Water Act jurisdiction within the review area (complete appropriate tables in Section II.C).
- There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in Section II.D).

B. Rivers and Harbors Act of 1899 Section 10 (§ 10)²

§ 10 Name	§ 10 Size	§ 10 Criteria	Rationale for § 10 Determination
N/A.	N/A.	N/A.	N/A.

C. Clean Water Act Section 404

Territorial Seas and Traditional Navigable Waters ((a)(1) waters): ³			
(a)(1) Name	(a)(1) Size	(a)(1) Criteria	Rationale for (a)(1) Determination
N/A.	N/A.	N/A.	N/A.

Tributaries ((a)(2) waters):			
(a)(2) Name	(a)(2) Size	(a)(2) Criteria	Rationale for (a)(2) Determination
N/A.	N/A.	N/A.	N/A.

Lakes and ponds, and impoundments of jurisdictional waters ((a)(3) waters):			
(a)(3) Name	(a)(3) Size	(a)(3) Criteria	Rationale for (a)(3) Determination
N/A.	N/A.	N/A.	N/A.

Adjacent wetlands ((a)(4) waters):			
(a)(4) Name	(a)(4) Size	(a)(4) Criteria	Rationale for (a)(4) Determination
N/A.	N/A.	N/A.	N/A.

¹ Map(s)/figure(s) are attached to the AJD provided to the requestor.

² If the navigable water is not subject to the ebb and flow of the tide or included on the District’s list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

³ A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD Form.

D. Excluded Waters or Features

Excluded waters ((b)(1) – (b)(12)): ⁴				
Exclusion Name	Exclusion Size		Exclusion ⁵	Rationale for Exclusion Determination
WA1	0.16	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA2	0.01	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA3	0.06	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA4	0.03	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA5	0.01	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA6	0.27	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA7	0.54	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.

⁴ Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

⁵ Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

NAVIGABLE WATERS PROTECTION RULE**

Excluded waters ((b)(1) – (b)(12)): ⁴				
Exclusion Name	Exclusion Size		Exclusion ⁵	Rationale for Exclusion Determination
WA8	0.04	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA9	0.01	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA10	0.17	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA11	0.02	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA12	0.13	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA13	0.01	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA14	0.11	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.
WA15	0.04	acre(s)	(b)(1) Non-adjacent wetland.	It is a wetland that does not abut an (a)(1)-(a)(3) water. It is not located in a landscape position that would be flooded/inundated by an (a)(1)-(a)(3) water during a “typical year”. It is separated from an (a)(1)-(a)(3) water by more than a single natural or man-made barrier.

Other data sources used to aid in this determination:

Data Source (select)	Name and/or date and other relevant information
USGS Sources	N/A.
USDA Sources	N/A.
NOAA Sources	Water Level Data for Rainbow Bridge (Station 8770520) and Texas Point, Sabine Pass (Station 8770822)
USACE Sources	N/A.
State/Local/Tribal Sources	N/A.
Other Sources	FEMA and TWDB 2006 LiDAR elevation data; FEMA FIRM 4805110005B dated 9/2/1982; FEMA Flood Insurance Study 480511 dated 7/6/1982

B. Typical year assessment(s): Based on the location of the wetlands an analysis was needed to determine if the subject wetlands would be inundated by the flooding of surface water in a typical year by an a)1-a)3 water; and the nearest a)1-a)3 waters are tidal. The two nearest NOAA tide gauges to the subject site are: Rainbow Bridge and Texas Point, Sabine Pass, Texas. The data from each gauge was analyzed for the time frame of 2001 to 2020 to cover a tidal epoch (18.6 years). Both of the stations had eight to nine months of data (2012 through 2020). The Rainbow Bridge station had five months of data in 2001. The Rainbow Bridge station had no data during September 2017 which was the time frame for Hurricane Harvey.

The monthly high tides were averaged to obtain the highest water levels of the years (excluding when the gauges were incapacitated by a storms) to attempt to address those areas that would be inundated by flooding by the nearby tidal waterway in a "typical year". The highest tidal elevation, based upon a monthly average, occurs in April at the Rainbow Bridge and October at Texas Point. (April and October normally do not have many tropical systems). The April average for the Rainbow Bridge station was +2.49 feet. The October average for the Texas Point station was +2.69 feet. All were recorded in relation to NAVD 88.

A FEMA Flood Insurance Study dated July 6, 1982 studied the effects of coastal flooding from the Gulf of Mexico/Sabine Lake. Wave heights were computed along transects located along the coastal areas. Transect 2 was the closest transect to the project area. The stillwater elevations along Transect 2 for a 10-year event was 4.2 feet.

The LiDAR elevations for the project site, (which are also in NAVD 88), reveal all of the wetlands identified on the site are located at a base elevation at or above the 4-foot NAVD 88 elevation. Therefore, indicating that the wetlands on the site do NOT get inundated from flooding of Sabine Lake, the Neches River, or the Gulf of Mexico in a "typical year".

C. Additional comments to support AJD: In conclusion, we have verified that 19 separate wetlands exist on the site. These wetlands are:

- i) Not abutting an a)1-a)3 water.
- ii) Not inundated by flooding from an a)1-a)3 water in a "typical year"

**U.S. ARMY CORPS OF ENGINEERS
REGULATORY PROGRAM
APPROVED JURISDICTIONAL DETERMINATION FORM (INTERIM)
NAVIGABLE WATERS PROTECTION RULE**

- iii) Not physically separated by a single natural berm, dune, or similar feature.
- ivi) Not physically separated from an a)1-a)3 water by an artificial structure that allows direct surface hydrologic flow between an a)1-a)3 water and the wetland in review.
