

Public Notice

**U.S. Army Corps
Of Engineers**

Galveston District

Permit Application No: SWG-2016-00441

Date Issued: 27 June 2017

Comments

Due: 28 July 2017

**U.S. ARMY CORPS OF ENGINEERS, GALVESTON DISTRICT
AND
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY**

PURPOSE OF PUBLIC NOTICE: To inform you of a proposal for work in which you might be interested. It is also to solicit your comments and information to better enable us to make a reasonable decision on factors affecting the public interest. The U.S. Army Corps of Engineers (Corps) is not the entity proposing or performing the proposed work, nor has the Corps taken a position, in favor or against the proposed work.

AUTHORITY: This application will be reviewed pursuant to Section 10 of the Rivers and Harbors Act of 1899 and Section 404 of the Clean Water Act (CWA).

APPLICANT: Port of Houston Authority (POHA)
111 East Loop North
Houston, Texas 77029
POC: Mr. Garry McMahan
Telephone: 713-670-2590

LOCATION: The project site is located in the Houston Ship Channel (HSC), south of Lost Lake Placement area, at the confluence of the HSC and Old River, in Houston, Harris County, Texas.

LATITUDE & LONGITUDE (NAD 83):

Latitude: 29.766597 North;

Longitude: -95.095708 West

PROJECT DESCRIPTION: The applicant proposes to modify Permit 18784(02) to expand a barge fleeting facility. Jurisdictional activities include hydraulically or mechanically dredging approximately 550,000 cubic yards of dredged material, from a 28.5-acre area; installation of 9 monopiles; and installation of up to 70 dead men mooring structures. Dredge material is proposed to be placed into the Adloy Dredge Material Placement Area (DMPA), a private DMPA, located north of the project site, or into other Federal and/or POHA DMPAs, as noted in the project plans.

AVOIDANCE AND MINIMIZATION: The applicant has stated that they have avoided and minimized the environmental impacts by avoiding impacts to wetlands and avoiding placement of fill material into open water.

CURRENT SITE CONDITIONS: The project site is located adjacent to an existing barge fleeting area (to the east), on a tract of land surrounded by commercial development to the west and south, and a dredge placement area to the north.

NOTES: This public notice is being issued based on information furnished by the applicant. This project information has not been verified by the Corps. The applicant's plans are enclosed in 5 sheets.

A preliminary review of this application indicates that an Environmental Impact Statement (EIS) is not required. Since permit assessment is a continuing process, this preliminary determination of EIS requirement will be changed if data or information brought forth in the coordination process is of a significant nature.

Our evaluation will also follow the guidelines published by the U.S. Environmental Protection Agency pursuant to Section 404 (b)(1) of the CWA.

OTHER AGENCY AUTHORIZATIONS: The applicant has stated that the project is consistent with the Texas Coastal Management Program (CMP) goals and policies and will be conducted in a manner consistent with said Program. The Texas Railroad Commission will determine if the project is consistent with the goals and policies of the CMP.

The return water from the upland contained dredge material placement area(s) requires authorization under Nationwide Permit (NWP) 16. However, we have determined that the conditioned Section 401 certification, placed upon NWP 16 by Texas Commission on Environmental Quality (TCEQ), is not reasonably implementable or enforceable, according to 33 CFR 325.4(c). Prior to the performance of hydraulic dredging, the applicant must obtain a Section 401 water quality certification from the TCEQ for the effluent or return water discharge. A copy of the 401 certification must also be furnished to the Corps prior to performing hydraulic dredging.

The project site is located within the San Jacinto Waste Pit (SJWP) Area of Concern. Per the 2009 SJWP protocol, the applicant has coordinated sediment testing with the TCEQ Superfund Section. TCEQ determined that sediment from the proposed dredge site is suitable for placement in an upland contained placement area. The applicant proposes to adhere to this requirement by placing all dredged material into placement areas specified in the project plans.

NATIONAL REGISTER OF HISTORIC PLACES: The staff archaeologist has reviewed the latest published version of the National Register of Historic Places, lists of properties determined eligible, and other sources of information. The following is current knowledge of the presence or absence of historic properties and the effects of the undertaking upon these properties:

The state tracts proposed for work under this permit are included in the Texas Historical Commission's list of Sensitive state tracts. However, the western portion of the project is located in an area that has subsided in the last 50 years. The eastern portion is in an area that was extensively impacted by the construction of the Lost Lake Placement area.

THREATENED AND ENDANGERED SPECIES: Preliminary indications are that no known threatened and/or endangered species or their critical habitat will be affected by the proposed work.

ESSENTIAL FISH HABITAT: This notice initiates the Essential Fish Habitat consultation requirements of the Magnuson-Stevens Fishery Conservation and Management Act. Our initial determination is that the proposed action would not have a substantial adverse impact on Essential Fish Habitat or federally managed fisheries in the Gulf of Mexico. Our final determination relative to project impacts and the need for mitigation measures is subject to review by and coordination with the National Marine Fisheries Service.

PUBLIC INTEREST REVIEW FACTORS: This application will be reviewed in accordance with 33 CFR 320-332, the Regulatory Programs of the Corps, and other pertinent laws, regulations and executive orders. The decision whether to issue a permit will be based on an evaluation of the probable impacts, including cumulative impacts, of the proposed activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefits, which reasonably may be expected to accrue from the proposal, must be balanced against its reasonably foreseeable detriments. All factors, which may be relevant to the proposal, will be considered: among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, floodplain values, land use, navigation, shore erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs and, in general, the needs and welfare of the people.

SOLICITATION OF COMMENTS: The Corps is soliciting comments from the public, Federal, State, and local agencies and officials, Indian tribes, and other interested parties in order to consider and evaluate the impacts of this proposed activity. Any comments received will be considered by the Corps to determine whether to issue, modify, condition or deny a permit for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects, and the other public interest factors listed above. Comments are used in the preparation of an Environmental Impact Assessment and/or an EIS pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

This public notice is being distributed to all known interested persons in order to assist in developing facts upon which a decision by the Corps may be based. For accuracy and completeness of the record, all data in support of or in opposition to the proposed work should be submitted in writing setting forth sufficient detail to furnish a clear understanding of the reasons for support or opposition.

PUBLIC HEARING: The purpose of a public hearing is to solicit additional information to assist in the evaluation of the proposed project. Prior to the close of the comment period, any person may make a written request for a public hearing, setting forth the particular reasons for the request. The District Engineer will determine if the reasons identified for holding a public hearing are sufficient to warrant that a public hearing be held. If a public hearing is warranted, all known interested persons will be notified of the time, date, and location.

CLOSE OF COMMENT PERIOD: All comments pertaining to this public notice must reach this office on or before **28 July 2017**. Extensions of the comment period may be granted for valid reasons provided a written request is received by the limiting date. **If no comments are received by that date, it will be considered that there are no objections.** Comments and requests for additional information should reference our file number, **SWG-2016-00441**, and should be submitted to:
