1 Project Summary

The Port of Corpus Christi Authority (PCCA) has requested that Mott MacDonald conduct a formal terrestrial waters and wetlands delineation and habitat characterization, including a High Tide Line (HTL)/Mean High Water (MHW) line tidal elevation survey of six (6) separate proposed Beneficial Use (BU) sites located near the Corpus Christi Ship Channel in Port Aransas, Nueces and Aransas Counties, Texas (See Figure 1). The survey will cover the BU project sites and a 500-foot buffer area around each location. BU sites to be surveyed include HI-E (site approx. 138.7 acres, buffered area approx. 269.3 acres), SS2 (site approx. 94.8 acres, buffered area approx. 250.6 acres), SS1 (site approx. 307.6 acres, buffered area approx. 590.0 acres), PA4 (site approx. 163.1 acres, buffered area approx. 294.1 acres), MI (site approx. 362.3 acres, buffered area approx. 986.0 acres; actual surveyed area 764.6 due to restricted access to survey private property), and SJI (site approx. 593.1 acres, buffered area approx. 1,480.2 acres). The total area to be surveyed for the 6 BU sites, plus the 500-foot buffer is approximately 3,870 acres. Results of the waters and wetlands delineation, habitat characterization, and HTL/MHW line tidal elevation surveys will be used to support a Draft Environmental Impact Statement (EIS) being prepared by the U.S. Army Corps of Engineers (USACE) for the PCCA Ship Channel Deepening Project.

2 Waters and Wetlands Delineation Survey Workplan

Prior to conducting the waters and wetlands delineation, habitat characterization, and HTL/MHW line tidal elevation surveys, Mott MacDonald developed this field survey workplan (workplan) using previously developed field workplans for BU sites SJI, HI-E, SS1, and PA4 provided by PCCA (developed by previous consultant) and newly developed field workplans created by Mott MacDonald for BU sites MI and SS2. The surveys will cover the BU project sites and a 500-foot buffer area around each location. The waters and wetlands delineation and habitat characterization will be conducted in accordance with the 1987 USACE Wetlands Delineation Manual and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plain Region, which requires survey transects for areas greater than 5 acres. Mott MacDonald will also conduct investigations necessary to determine the likely jurisdictional status of any identified wetlands under USACE/Environmental Protection Agency (EPA) regulations or guidance resulting from applicable U.S. Supreme Court decisions.

Mott MacDonald developed the survey workplan's baseline and transects in accordance with the 1987 USACE Wetland Delineation Manual procedures found in Part IV (Methods), Section D (Routine Determinations), Subsection 2 (Areas Greater than 5 Acres in Size), Step 18 (Establish a baseline) and Step 19 (Determine the required number and position of transects). Survey baselines were developed using the BU site boundary paralleling the shoreline or ship channel. The baseline length was used to determine the required number of transects in accordance with Step 19, as referenced above. To be conservative, the survey plan was then developed by adding one additional transect to the number required and using that number of transects to divide the baseline into equal segments. At a minimum, Mott MacDonald will include one transect per segment; however, based upon the transects provided or the need to pick up unique vegetation communities, the survey plan may establish multiple transects within a baseline segment.

The survey workplan, including baseline and transects developed for BU sites HI-E, SS1, SS2, PA4, MI, and SJI are summarized in Table 1 and map figures are provided in Figure 2. In addition to the data collected along transects, Mott MacDonald will conduct routine wetland determinations for wetlands and/or waters that occur between transects, as needed. Pedestrian meander surveys will be conducted between transects to confirm that all wetlands/waters have been identified within the BU sites and their 500-foot adjacent areas. Note that surveys will be conducted on lands with approved PCCA access only and that transects and resource boundary delineations will stop at private property parcel boundaries, where appropriate.

Table 1: Survey Workplan Summary

Site	Baseline Length (mile)	Baseline Segments (number)	Segment Length (mile)	Transects (number)	Transect Length Total (mile)
HI-E	0.85	4	0.21	5	2.4
SS2	1.16	6	0.20	9	2.8
SS1	1.89	6	0.32	9	3.7
PA4	1.19	6	0.20	7	2.2
MI	5.14	14	0.37	14	4.2
SJI	7.19	20	0.36	20	6.5
Total	17.42	56	N/A	64	21.8

HTL and MHW tidal elevations will also be recorded for each BU project site. The HTL elevation for this area (+2.76 ft NAVD88) has been recently verified by USACE (SWG-2015-00417). HTL is the upper limit of USACE jurisdiction along tidal shorelines, and in the absence of jurisdictional wetlands, which may extend above the HTL. The MHW line elevation for this area (+1.01 ft NAVD88) was obtained from the National Oceanic and Atmospheric Administration’s (NOAA) Tide Station No. 8775296: USS Lexington. The MHW line demarcates the upper limit of “navigable waters” and USACE jurisdiction under Section 10 of the Rivers and Harbors Act of 1899.”

Locations and boundaries of potential jurisdictional waters and wetlands will be identified and recorded using Global Positioning System (GPS) equipment in accordance with USACE’s Standard Operating Procedures (SOP) for Recording and Submitting Jurisdictional Delineations Using GPS and GIS Tools and Technologies dated 04/21/2016.

C. USACE Wetland Determination Data Forms

WETLAND DETERMINATION DATA FORM – Atlantic and Gulf Coastal Plain Region

Project/Site: PCCA Channel Deepening - HI-E City/County: Nueces Sampling Date: 5/17/21
 Applicant/Owner: Port of Corpus Christi Authority State: TX Sampling Point: UD01BPH_HIE
 Investigator(s): BH Section, Township, Range: N/A
 Landform (hillslope, terrace, etc.): Coastal prairie Local relief (concave, convex, none): None Slope (%): 1-2
 Subregion (LRR or MLRA): LRR T / MLRA 150B Lat: 27.855182 Long: -97.060491 Datum: NAD83
 Soil Map Unit Name: BT - Barrada-Tatton association, 0 to 1 percent slopes, occasionally ponded NWI classification: Upland (not mapped)

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No _____ (If no, explain in Remarks.)
 Are Vegetation N, Soil N, or Hydrology N significantly disturbed? Are "Normal Circumstances" present? Yes X No _____
 Are Vegetation N, Soil N, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <u>X</u> Hydric Soil Present? Yes <u>X</u> No _____ Wetland Hydrology Present? Yes _____ No <u>X</u>	Is the Sampled Area within a Wetland? Yes _____ No <u>X</u>
Remarks: Although hydric soil was present, the sampled area was determined to not be within a wetland due to the lack of wetland hydrology and dominant hydrophytic vegetation. The area received approximately 4.2 inches of rain the previous day (5/16/21). This sample point is an upland/wetland boundary pit. APT calculated normal conditions for this date and location.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
 Wetland hydrology was not present.
 Area received approximately 4.2 inches of rain on 5/16/21. The freewater in the soil pit and saturation were determined to be a result of the recent rainfall and indicative of normal conditions due to lack of other hydrology indicators, hydric soil, and the area being dominated by upland and FACU species.

 Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:
Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.
Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.
Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.
Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes No

Remarks: (If observed, list morphological adaptations below).

Remarks: The sampled area was determined to be within a wetland due to the presence of dominant hydrophytic vegetation, hydric soil and wetland hydrology. The area received approximately 4.2 inches on rain on 5/16/21 which may be responsible for some hydrological indicators. APT calculated normal conditions for this date and location.

Remarks: The sampled area was determined to be within a wetland due to the presence of dominant hydrophytic vegetation, hydric soil and wetland hydrology. The area received approximately 4.2 inches on rain on 5/16/21 which may be responsible for some hydrological indicators. APT calculated normal conditions for this date and location.

Remarks: The sampled area was determined to be within a wetland due to the presence of dominant hydrophytic vegetation, hydric soil and wetland hydrology. The area received approximately 4.2 inches on rain on 5/16/21 which may be responsible for some hydrological indicators. APT calculated normal conditions for this date and location.

Remarks: The sampled area was determined to be within a wetland due to the presence of dominant hydrophytic vegetation, hydric soil and wetland hydrology. The area received approximately 4.2 inches on rain on 5/16/21 which may be responsible for some hydrological indicators. APT calculated normal conditions for this date and location.

Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes _____ No X

Remarks: (If observed, list morphological adaptations below).

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes No

Remarks: (If observed, list morphological adaptations below).

Dominant hydrophytic vegetation was present.

Remarks: Although hydric soil and wetland hydrology were present, the sampled area was determined to not be within a wetland due to the absence of dominant hydrophytic vegetation. Algal flats are considered special aquatic sites. APT calculated normal conditions for this date and location.

Remarks: Although hydric soil and wetland hydrology were present, the sampled area was determined to not be within a wetland due to the absence of dominant hydrophytic vegetation. Algal flats are considered special aquatic sites. APT calculated normal conditions for this date and location.

Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes No

Remarks: (If observed, list morphological adaptations below).

Definitions of Four Vegetation Strata:
Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.
Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.
Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.
Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes No _____

Remarks: (If observed, list morphological adaptations below).

Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

 ___ 2 - Dominance Test is >50%
 ___ 3 - Prevalence Index is ≤3.0¹
 ___ Problematic Hydrophytic Vegetation¹ (Explain)

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:
Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.
Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.
Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.
Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes _____ No X

Remarks: (If observed, list morphological adaptations below).

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No _____ (If no, explain in Remarks.)
 Are Vegetation N, Soil N, or Hydrology N significantly disturbed? Are "Normal Circumstances" present? Yes X No _____
 Are Vegetation N, Soil N, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____ Hydric Soil Present? Yes <u>X</u> No _____ Wetland Hydrology Present? Yes <u>X</u> No _____	Is the Sampled Area within a Wetland? Yes <u>X</u> No _____
Remarks: The sampled area was determined to be within a wetland due to the presence of dominant hydrophytic vegetation, hydric soil and wetland hydrology. APT calculated normal conditions for this date and location.
